SYNTROX.ai

The Governance and Safety Standard for the Agentic Economy.

We stop Enterprise AI Agents from hallucinating, leaking data, and burning cash—automatically.

The Team

VETERANS & VISIONARIES

The Shift

THE WORLD HAS MOVED TO LEVEL 3 AUTONOMY

CRITICAL ALERT DEC 28, 2025

"AI models are beginning to find critical vulnerabilities and creating risks of severe harm."

Sam Altman
CEO, OPENAI

OpenAI is hiring a "Head of Preparedness" for $555k/yr.

Syntrox automates this entire role.

Level 1
CHATBOTS

Level 2
REASONERS

The Hair on Fire Problem

THE TRUST GAP IS BLOCKING ADOPTION

Unpredictability

Agents stuck in infinite loops can burn $20,000 in API credits overnight.

Security Risks

Hackers using agents to target global entities with minimal intervention.

Compliance

Banks cannot deploy agents that might hallucinate regs or leak PII.

SYNTROX.ai

The Solution

ACTIVE GOVERNANCE

The Firewall

THE PROXY

Intercepts PII and "Poison Prompts" in real-time with **<20ms latency**.

The Judge

ASYNC EVAL

Scoring every interaction using **DeepEval** to ensure Truthfulness and Policy Adherence.

The Kill Switch

INSTANT FREEZE

Instantly freeze a rogue agent or the entire fleet if **risk thresholds** are breached.

VPC-Native

Runs entirely inside the bank's firewall as a Universal Docker Image. Data never leaves the premise.

Universal Proxy

Powered by LiteLLM. Compatible with Azure OpenAI, AWS Bedrock, and Anthropic out of the box.

Performance Core

Built on ClickHouse (OLAP) and Redis (Hot state) to handle `10k+ spans/sec`.

The "Killer Feature"

WHAT HAPPENS WHEN AN AGENT GOES ROGUE?

Syntrox

FLEET ACTIVE

STATUS QUO

Developers redeploy code.

Time: 15+ Minutes.

SYNTROX

Ops Manager hits one button.

Time: < 1 Second.

The Digital Workforce

GOVERNING THE NEXT TRILLION DOLLARS OF AUTONOMY

MARKET INTELLIGENCE

82%

PLAN TO ADOPT AGENTS

(Capgemini)

15%

OF ALL WORK BY 2025

(Gartner)

"In 10 years, there will be more Digital Agents than Human Employees."

Level 3 Inflection

Moving from passive Chatbots (L2) to Agents (L3) that actively move money.

2025 Benchmark

1,000+ global enterprises deploying 100,000+ autonomous agents.

Market Capture

THE GOVERNANCE TAX

SYNTROX.ai

Competitive Landscape

FROM DEBUGGING TO GOVERNING

	Syntrox ★ US	LangSmith	DIY Scripts
CORE FUNCTION	**Active Intervention** Blocks bad actions **before** they happen via real-time proxy.	**Passive Monitoring** Logs errors after money is already lost.	**Manual Regex** Brittle rules that break at scale.
DEPLOY-MENT	**On-Prem / VPC** Data never leaves your enterprise firewall.	**Cloud SaaS** Requires sending data to a 3rd party.	**Local Only** Hard to scale or govern across teams.
CONTROL	**Global Kill Switch** Freeze any rogue agent in under 1 second.	**No Emergency Brake** Manual rollback. Downtime in minutes.	**None** No centralized control at all.

"Competitors build tools for developers; we build safety gear for the C-Suite."

SYNTROX.ai

GTM Strategy

THE TROJAN HORSE ADOPTION

1

The Wedge

Offer `@trace SDK` free to solve dev debugging pains.

2

The Audit

Free 2-Week "Shadow Test". Deliver Risk Report on PII.

3

The License

Convert audit to **`$150k/yr`** Enterprise VPC License.

SYNTROX.ai

Something Developers Are Screaming For

FULL OBSERVABILITY FOR STOCHASTIC SYSTEMS

THE PAIN POINT

"Why did my Agent spend $50 on a loop?"

LLMs are black boxes. When they fail, they fail silently and expensively. Developers are currently debugging this with `print()` statements.

THE SOLUTION

MRI for Agents

- Real-time Cost & Latency Tracking
- Visual "Thought Process" Mapping
- Instant PII Detection & Redaction
